OF BETTER HEALTH

For the first time in its 300 year history, New Jersey is developing a major center for medical and dental education, research, and community health services. This giant stride is being taken through plans for the new campus of the New Jersey College of Medicine and Dentistry. The scope of financial commitment by government as well as the depth of professional and private interest are such that this new college complex shows great promise of rapid development into a recognized health center.

The facilities will help:

supply the rapidly accelerating need for more physicians, dentists and biomedical personnel.

provide New Jersey youth with greater opportunities to receive professional training.

fill the alarming shortage of American trained interns and residents in New Jersey hospitals.

take leadership in providing health services required by the State's growing population.

The interim phase of construction is underway. The permanent campus will be completed in 1972.

A challenging future faces the College as it moves to Newark. There will be opportunities to expand and improve medical and dental education, paramedical training and to increase the scope and quality of out-patient and hospital services.

In its plan for the future the College will — increase its annual student admissions from 80 in medicine and 55 in dentistry to 112 and 80 respectively — expand its faculty and service personnel — develop academic affiliation with other colleges and universities in the community to enrich and broaden its curriculum, service, and research potential.

The College will affiliate in various ways with hospitals and

health agencies throughout New Jersey to further strengthen community medicine and dentistry.

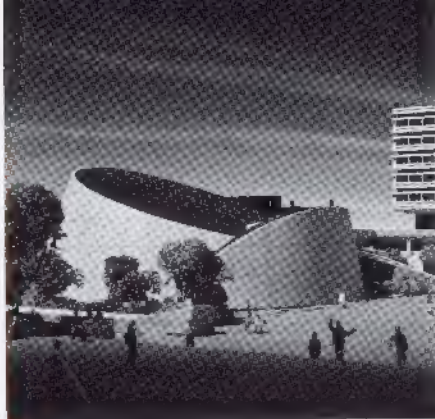

The building of the new campus carries with it the promise of significant economic impact, not only during the construction phase, but also through its continuing operation.

In essence, the College, a state supported institution of higher learning, is committed to become a major community, state, and national resource to fulfill the promise of better health through education, research, community service and social and economic programs.

THE NEW JERSEY COLLEGE OF MEDICINE AND DENTISTRY

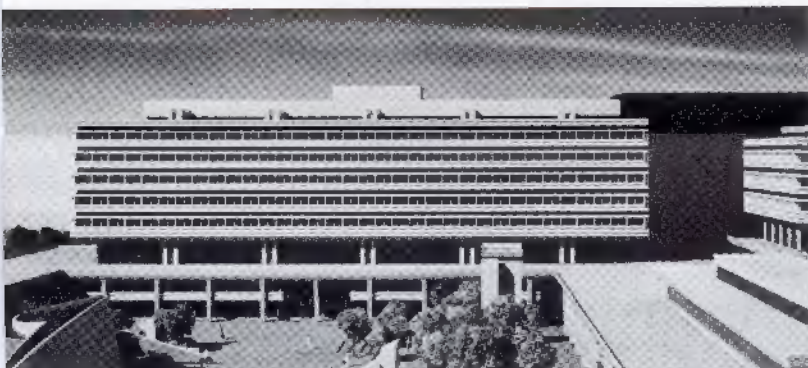

The new campus will include a school of medicine, a dental school, a teaching hospital, a health affairs library, an auditorium, a community comprehensive mental health center, a student union, and student housing, a power plant and an underground parking garage. Thirty million dollars have been pledged by the State. The remainder of the funds is being sought from the federal government, other public, private and foundation sources.

AUDITORIUM

An educational and architectural focal point, the Auditorium will seat 1,000 — enough to accommodate the entire student body and faculty. Installation of all types of audio-visual media is planned. It can serve as a center for postgraduate and continuing education programs and other health programs designed for the profession and the public.

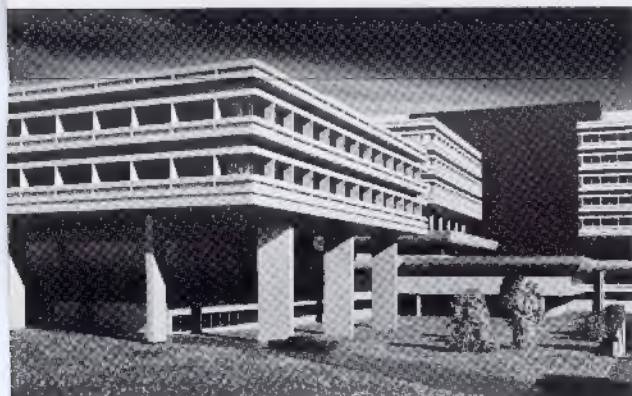

MEDICAL SCHOOL

This eight story building — the largest on the campus — will house basic and clinical science departments, multidisciplinary core teaching laboratories for both medical and dental students, Audio-Visual Center, animal quarters, repair shops, and other support areas.

TEACHING HOSPITAL

This 272 bed facility is designed and equipped as a statewide referral hospital to handle complex cases. It is designed to function as the College's primary clinical teaching and research center.

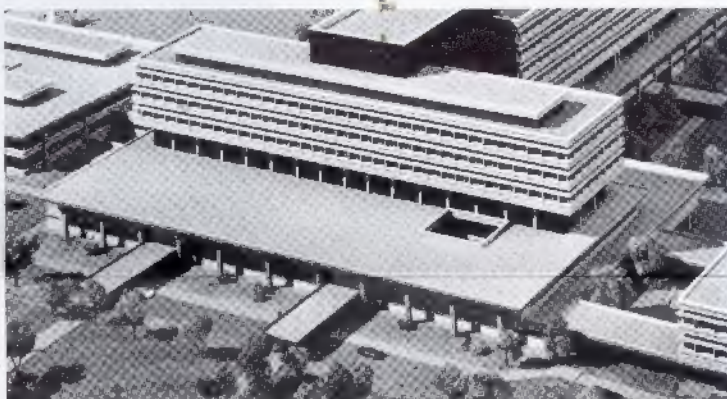

COMMUNITY COMPREHENSIVE MENTAL HEALTH CENTER

The Center will adjoin the teaching hospital and provide area residents with broad based in-patient and out-patient service. It will house the offices, clinical teaching and research facilities of the College's Department of Psychiatry.

Gilbert L. Seltzer

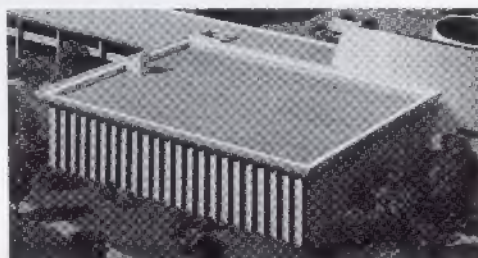

DENTAL SCHOOL

The modern 4 story building will contain student lecture halls, pre-clinical laboratories, 236 dental chairs for clinical teaching and patient care, clinical research laboratories and faculty offices.

LIBRARY

This 125,000 volume health affairs library will be a teaching and research resource for students, graduates, postgraduates and faculty. It will serve practicing dentists and physicians throughout the state, other students and individuals requiring the services of such a library.

MARTLAND HOSPITAL UNIT

Until completion of the College's permanent facilities in 1972, the focus of the project will be the existing Martland Hospital Unit (formerly Newark City Hospital) and an interim campus consisting of eleven single-storied, pre-engineered buildings now being erected on an 11½-acre site adjacent to the Martland Unit. These structures are designed to accommodate the College's first move into the City. They will house the basic sciences and clinical medicine teaching and research facilities and administrative offices. The Hospital, with the largest case load of any general hospital in the State, will be the means through which the College will seek to bring improved health services to the people of Newark.

PROGRAM PLANS

The New Jersey College of Medicine and Dentistry, the state's only 4-year medical and dental school, has made a decision which can place the College in a singular position in American health education. Plans are underway to locate its facilities and human resources in the heart of one of the most depressed, disease ridden urban ghettos in the nation.

Other educational institutions are located in slums. However, this is the product of urban change; the colleges located themselves before the surrounding community decayed. The New Jersey undertaking, however, represents a conscious public decision to utilize this center of learning to achieve not only the conventional results of medical and dental education, but also to act as a catalyst for the economic and social revitalization of the inner city.
